## FAMI Declaration on Motorcycle Road Safety

FAMI has its missions to meet the needs for safe, economical, efficient, and environment friendly motorcycles for greater mobility in modern society.

FAMI also recognizes that road accidents and fatalities are prevalent and must be minimized by taking correct actions. However, road safety is a complex challenge demanding the integrated efforts of all stakeholders encompassing the vehicle manufacturers, road/vehicle users and government agencies. And one crucial component for motorcycle safety is the appropriate positioning of motorcycles in the transport and road environment policies of the government.

FAMI, hereby, declares its commitment to improve road safety conditions through its members' activities in collaboration with stakeholders. Ultimately, the main goal of this declaration is to demonstrate FAMI members' commitment to mitigate road users' risk and lead toward zero accidents.

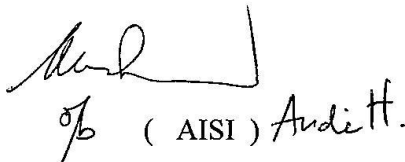

FAMI members' activities are developed and implemented in respect and in compliance with domestic and international laws on road safety. FAMI also considers guidelines, recommendations and policies from respected institutions, such as United Nations Road Safety Collaboration, World Health Organizations, and International Motorcycle Manufacturer Association. FAMI members' activities will be given priorities on road safety in accordance to the following principles:

- Promotion of the preservation and respect for life
- Provision of road users' education through training, seminars, dissemination of useful information and awareness campaigns
- Development of road users' proper behavior, attitude, skills and knowledge to mitigate risks
- Strengthening members' capability by exchange of information and best practices and sharing of resources
- Collaboration with stakeholders on improvement of road safety conditions and environment
- Improvement on product safety by technology development
